

Fuel Delivery That Runs Itself

Gravity Fuel System is the **ONLY** truly automated Frac Fueling System, providing worry-free, continuous fill operations with the lowest cost for over a decade. No pumps, no generators, no emissions, and no fuel technician required.

Gravity outperforms every other AFS on the market – and delivers savings of \$30K per month with our Solo system, and up to \$75K per month for simulfrac.

- Double-Walled Flame Shielded 12,000 gallon tank is rated for 2000 degrees for 2 hours
- Thermal cut-off valves under the main feed points that snap shut if the temperature reaches 165 degrees
- 1000 gallons of welded steel containment incorporated in the unit under all drip points
- 900-gallon clear diesel tank structurally integrated
- Maximum of hose pressure of 7.2 PSI for gravity flow of fuel. NO high hose pressure risking fuel spray.
- No limit on the distance we can run hose to an asset and still have head pressure
- No limit to the number of assets we can tie into with the Gravity system - a single unit for Simulfrac or Dual Frac
- Simple fast set up – 2 hours max
- Ability to fill roustabout tanks to support ancillary equipment from the Gravity unit
- No electronic or pneumatic components to fail
- Extremely low maintenance and upkeep cost
- Dry break connections for easy hose replacement on trunk lines (every 24 feet)
- Gravity System full dimensions – 53' X 16'
- Patented in the U.S. and multiple countries internationally
- The only truly automated system with no manual intervention required. No tech needs to push buttons or pull levers to fill the asset
- No pumps, no generators, no motors – NO DOWNTIME
